SAM SITE STATUS
CEASE-FIRE ZONE, EGYPT

25X1D

25X1D

25X1D

1. This report provides the occupancy status during the period [redacted] of the 94 SA-2 and the five SA-3 surface-to-air missile (SAM) sites that are located within the 50-kilometer* zone west of the Suez Canal. The criterion for determining occupancy was the identification, within the site, of missile equipment, dummy missile equipment, or objects which could not be identified as non-missile-related equipment. Thus, the designation of a site as occupied does not constitute a judgment that the site is operational.

25X1D

3. Three SA-2 SAM sites were newly identified [redacted] (one confirmed, one possible, and one suspect), bringing the total number of sites in the cease-fire zone in Egypt to 99. [redacted] of [redacted] provided coverage of all 99 identified SAM sites. Fifty SA-2 SAM sites and all five SA-3 sites were occupied, while 30 SA-2 sites were unoccupied and occupancy of 14 could not be determined. One previously known SA-2 site was newly occupied (Figures 1 and 2). The occupancy of SAM sites is summarized below:

Table 1. Summary of SAM Site Occupancy

Status	[redacted]			
Occupied SA-2 Sites	28	51	50	50
Occupied SA-3 Sites	0	5	5	5
Total Occupied	28	56	55	55
Unoccupied SA-2 Sites	46	38	34q	30**
Unoccupied SA-3 Sites	5	0	0	0
Total Unoccupied	51	38	34	30**
SA-2 Sites occupancy unknown	0	0	6	14
SA-2 Sites not covered	0	0	1	0
Total	79	94	96	99

25X1D

4. Detailed occupancy status and order of battle for SAM sites in the cease-fire zone of Egypt are given in Table 2, which is keyed to Figure 3. The column heading "NUMBER" indicates the arbitrary number assigned to the site by NPIC when the site was first identified. The following abbreviations appear in the table: OCC for occupied, UNP for unoccupied, and UKN for unknown. A blank space indicates that the site was not covered by photography of that particular date.

*Based upon information from the Department of State delineating the 50-kilometer cease-fire zone. The eastern boundary of this zone is the center of the navigation channel through the Suez Canal and the Great Bitter Lake.

**Includes the three that were newly identified on [redacted]

5. All three of the newly identified SA-2 sites are in areas where construction activity had been observed previously, and all three have reached the stage of construction where they could be at least tentatively identified as SA-2 sites.

6. The newly identified confirmed SA-2 SAM Site (number 330) was observed approximately 14 nautical miles (nm) northwest of the city of Suez, at 30-06-20N 032-19-40E. On 18 August, the site had two drive-through launch positions, one possible launch position, a bunkered guidance area, and a possible bunkered acquisition radar position. On [redacted] construction activity was observed in the area of the launch positions. An unidentified area of construction activity immediately east of the site had been seen previously on [redacted]. Construction activity in the guidance area of this site was evident on [redacted]. The guidance area and the possible acquisition radar position were bunkered on [redacted].

7. The newly identified possible SA-2 SAM site (number 331) was observed approximately 16 nm northwest of Suez, at 30-09-50N 032-17-40E. On [redacted] the site consisted of a bunkered guidance area with a revetted radar position on top, a bunkered acquisition radar position, and three scraped areas. Earlier construction had been seen at this site. On [redacted] unidentified activity was evident in the area. [redacted] heavy bomb damage was noted in the guidance area, and an excavation for a possible acquisition radar position was observed. [redacted] a structure was under construction in the possible acquisition radar position, and new access roads were evident.

8. The newly identified suspect SA-2 SAM site (number 332) was observed under construction 19 nm northwest of Suez, at 30-08-20N 032-14-50E. On 18 August, the site consisted of a probable guidance area, a possible bunkered acquisition radar position, and several areas of unidentified earth scraping. Four unidentified objects or possible pieces of construction equipment were observed in the area. On earlier photography, unidentified activity was noted in the area on [redacted] heavy bomb damage was observed at the probable guidance area under construction. On [redacted] the probable guidance area and the possible acquisition radar position were evident.

9. Construction activity for a possible guidance area was observed in the area of a former T-shaped structure 9.0 nm west of the Suez Canal and 11.2 nm northwest of Ismailia, at 30-43-50N 032-08-00E. The T-shaped structure was covered and earth mounded, and a large rectangular revetment was constructed at the base of this mound. Two bunkers, possibly drive-through, had been constructed in two areas adjoining the possible guidance area, one to the east and the other to the west.

10. Previous observations of this area were as follows: on [redacted] heavy bomb damage and cratering were evident in the area of the T-shaped structure. On [redacted] bomb damage and cratering had been cleaned up, and the T-shaped structure was covered but not mounded. The bunkers were not discernible. On [redacted] the T-shaped structure was still not mounded. The two bunkers (one under construction) were discernible. Vehicles and equipment observed included one cargo truck, one probable utility vehicle, and six unidentified objects.

11. The previously unoccupied SA-2 Site 318 was occupied on [redacted]. A probable SA-2 missile on a launcher was in each of the five launch positions of the site, at least ten probable missile transporters were dispersed north-northwest of the site, and a probable FAN SONG radar and at least three probable vans were present in the guidance area. The site consists of five revetted drive-through launch positions, a revetted guidance area, a bunkered acquisition radar position, and at least eight widely dispersed equipment-hold revetments. A linear and a T-shaped excavation are located immediately west of the site. The site was not occupied and the transporters were not present when the site was observed on [redacted]. Two revetments adjacent to the acquisition radar position and the eight hold revetments were not present on [redacted].
